

Executive Research Pack: TCS Finland Top Accounts Workshop Intelligence

Executive summary

This pack is built for **workshop preparation and account planning**, not generic company summaries. It focuses on what a TCS Finland leader/account team can credibly walk in with: evidence-backed **24–36 month priorities, friction points, value-chain and data/technology implications**, and **workshop-worthy hypotheses** that connect to **TCS engagement angles**.

Account set and replacement decision. The default six were retained because **five of the six have clearly public, customer-specific TCS relationship evidence** via TCS press releases (Kesko, Euroclear Finland, DNA, UPM, Kalmar). ¹

OP Pohjola (OP Financial Group / OP Corporate Bank) has strong public strategy and transformation signals (AI-first, sustainability finance, ICT investment) but **no clear, current group-level TCS IT contract publicly evidenced** in high-trust sources available here; it is therefore treated as a **strategic target / likely-fit account** for TCS Finland workshoping, not a confirmed TCS delivery relationship. ²

Most “why now” signals across the portfolio (Finland relevance).

Kesko is executing the **largest IT services transformation in its history**, concentrating IT partners and explicitly targeting AI, automation, and security; TCS is one of the named main partners. ³

DNA has a **five-year partnership with TCS** to migrate **up to 80% of enterprise apps to public cloud by 2030**, with **100+ apps in 24 months** and a dedicated migration factory model. ⁴

Kalmar is post-demerger (independent since mid-2024) and has a **2026 TCS partnership** to consolidate IT into a single model, using AI-driven operations and improving employee experience—classic “post-separation IT + run/transform” territory. ⁵

Euroclear Finland has completed a major market-infrastructure modernization (T2S migration + core platform integration), with TCS BaNCS publicly named; now the value is in **industrializing operations, standards evolution, resilience and data/AI** on top of a harmonized platform. ⁶

UPM has an AI-led IT transformation with TCS (ignio platform, SIAM + end-user + hybrid cloud), while also undertaking strategic portfolio initiatives and scaling next-generation biochemicals (Leuna) that demand reliable digital foundations. ⁷

OP Pohjola is explicitly **AI First**, investing in ICT (including data protection and cybersecurity), and launching AI assistants in customer channels—making it a high-value workshop target on **responsible/regulated AI + modernization + cost/resilience**. ⁸

Workshop design meta-hypothesis (cross-account). Across these accounts, the winning workshop posture is to treat **AI as an operating-model change** anchored in (a) platform modernization, (b) data governance and control, and (c) resilience/security—then pick 2–3 “value threads” per customer (customer experience, productivity/cost, risk/compliance). This aligns with explicit customer statements about AI + security + efficiency at Kesko, DNA, OP Pohjola, Euroclear, Kalmar, and UPM. ⁹

Part A — Executive summary table

Account	Industry	Relationship status	3 confirmed priorities (24–36 months)	3 key problem statements (workshop-grade)	Strongest workshop angle	Why-now signal
OP Pohjola / OP Corporate Bank	Banking / Insurance / Wealth	Strategic target / likely-fit (no clear public TCS IT delivery evidence found) ¹⁰	AI First + tech/ data/AI embedded in strategy; AI assistants in channels ¹¹ ; increased ICT investment incl. cybersecurity/ data protection ¹² ; sustainable finance + ESRS/ CSRD reporting + portfolio decarbonization targets ¹³	“How do we scale AI safely in a regulated bank while proving measurable value?” ¹⁴ ; “How do we protect customer trust amid rising cyber and fraud threats without slowing delivery?” ¹⁵ ; “How do we fund modernization while protecting profitability/cost-to-income?” ¹⁶	Responsible AI operating model for a universal financial-services group (AI + governance + cost/ resilience) ¹⁷	Public AI-first stance + elevated ICT spend + new benefits package and brand change driving channel engagement ¹⁸

Account	Industry	Relationship status	3 confirmed priorities (24–36 months)	3 key problem statements (workshop-grade)	Strongest workshop angle	Why-now signal
Euroclear Finland	Capital markets infrastructure / CSD	Confirmed TCS customer ¹⁹	Run and evolve T2S-integrated settlement model (efficiency, liquidity, harmonization) ²⁰ ; maintain/extend modern post-trade platform (TCS BaNCS; single platform) ²¹ ; strengthen resilience + modern governance/innovation (AI/ DLT themes at group level) ²²	“How do we keep post-trade operations resilient while changing standards and market practices?” ²³ ; “How do we minimize market-change friction and participant onboarding cost?” ²⁴ ; “How do we unlock value from real-time ownership data while staying GDPR-safe?” ²⁵	‘Next horizon after T2S’: automate, reduce market friction, and productize data services ²⁶	Major transformation milestone (T2S) achieved; now optimize + standardize + innovate on top ²⁰

Account	Industry	Relationship status	3 confirmed priorities (24–36 months)	3 key problem statements (workshop-grade)	Strongest workshop angle	Why-now signal
Kesko	Retail / Grocery / Trade	Confirmed TCS customer 27	Execute 2024–2026 strategy for profitable growth across divisions 28 ; modernize IT operating model (largest IT services transformation; fewer partners; AI/automation/security) 29 ; scale data + AI for personalization, demand/ assortment, and logistics efficiency with governance (AI Act readiness) 30	“How do we modernize ERP + core landscape without disrupting store/ logistics execution?” 31 ; “How do we industrialize data/AI while meeting AI Act/ NIS2 expectations?” 32 ; “How do we drive productivity and reduce waste in a low-growth environment?” 33	AI-powered ‘K Group digital core’: SAP S/4 + data platform + AI ops 34	Explicit multi-partner IT transformation + TCS strategic IT partner role 35

Account	Industry	Relationship status	3 confirmed priorities (24–36 months)	3 key problem statements (workshop-grade)	Strongest workshop angle	Why-now signal
DNA	Telecom	Confirmed TCS customer 4	Migrate up to 80% of enterprise apps to public cloud by 2030; 100+ apps in 24 months 4 ; use cloud-based data platform to enable AI services (stated as necessary) 4 ; sustain network quality + security/resilience amid high data volumes and competitive market 36	“How do we migrate at scale without reliability incidents for millions of customers?” 37 ; “How do we build a cloud+data foundation that makes AI practical (not experimental)?” 4 ; “How do we reduce run-cost while modernizing OSS/BSS and enterprise apps?” (inference rooted in stated cost optimization goals) 4	Cloud migration factory + ‘AI-ready telecom’ operating model 4	Five-year program with quantified migration scope; nearshore factory model already planned 4

Account	Industry	Relationship status	3 confirmed priorities (24–36 months)	3 key problem statements (workshop-grade)	Strongest workshop angle	Why-now signal
UPM	Forest products / Industrial materials / Bioindustry	Confirmed TCS customer 38	AI-first IT operating model + continuity + end-to-end IT transformation (ignio, SIAM, hybrid cloud) 38 ; execute growth/ portfolio transformation (e.g., intended graphic paper JV; plywood strategic review) 39 ; scale next-gen renewables/ biochemicals (Leuna ramp-up and new products) 40	“How do we simplify and industrialize the IT value chain across a multi-business global group?” 38 ; “How do we digitize sustainability/ traceability and new-product scale-up without data fragmentation?” 41 ; “How do we improve cost and time-to-market while funding strategic moves?” 42	Digital foundation for portfolio + industrial scale-up (IT as enabler of bioeconomy growth) 43	Stated agreement for end-to-end IT transformation + major operational milestones (Leuna) 43

Account	Industry	Relationship status	3 confirmed priorities (24–36 months)	3 key problem statements (workshop-grade)	Strongest workshop angle	Why-now signal
Kalmar	Industrial equipment / Logistics / Automation	Confirmed TCS customer ⁴⁴	Post-demerger operating model maturation + efficiency gains (Driving Excellence; €50m by end-2026) ⁴⁵ ; accelerate electrification/ automation/ digitalisation in product portfolio ⁴⁶ ; consolidate IT into single integrated delivery model with AI-driven ops (TCS partnership) ⁴⁷	“How do we deliver post-separation IT simplification without losing business agility?” ⁴⁸ ; “How do we monetize connected equipment data into recurring services?” ⁴⁹ ; “How do we execute efficiency program while investing in innovation?” ⁵⁰	Post-separation IT + digital product/ service monetization ⁵¹	New independent company + active efficiency initiative + new IT partnership (2026) ⁵²

Part B — Six deep account briefs

Notation discipline used throughout Part B:

“**Confirmed**” = directly supported by cited public sources. “**Informed inference**” = plausible hypothesis grounded in cited facts but not explicitly stated by the company. “**Not publicly evidenced**” = no credible public system/process name found; do not assume.

OP Pohjola / OP Corporate Bank

Relationship status (TCS Finland): strategic target / likely-fit. No high-trust public evidence of a current, group-level TCS IT services engagement was found in the sources used here. A limited relationship signal exists via OP Uusimaa partnering with TCS for a banking package supporting foreign employees relocating to Finland; this is **not** evidence of OP’s IT outsourcing. ⁵³

Company overview (Section 1)

OP Pohjola (formerly OP Financial Group) is Finland’s largest financial-services provider, with banking, insurance and wealth management under the group’s cooperative model. **Confirmed:** OP states it has **more than two million owner-customers** and **over 14,000 employees** and describes itself as Finland’s

largest provider of financial services. ⁵⁴

The group changed its name to **OP Pohjola effective 28 Oct 2025**, while noting the structure and legal entity names of companies/business units did not change. ⁵⁴

In its H1 2024 reporting, OP describes the central cooperative and subsidiaries as responsible for developing products/services, digital channels, and shared technology/data/cybersecurity capabilities, and reports development expenditure including ICT-related costs. ⁵⁵

Transformation-relevant leadership that is publicly visible in these sources includes President & Group CEO **Timo Ritakallio** (quoted in official reporting) and corporate banking leadership visibility via public interviews/communications (used as supporting context only). ⁵⁶

Material structural moves: rebrand + renewed owner-customer benefits package tied to Finnish tax change effective 1 Jan 2026. ⁵⁷

Confirmed strategic priorities for the next 24-36 months (Section 2)

The priorities below are grounded in OP's own reporting and communications (tier-1 sources here are OP interim/half-year reports and OP's Year site).

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences (inference)
Embed AI First and scale customer-facing + employee AI tools	OP frames AI as transformative and is already deploying AI assistants; scaling requires governance, platform readiness, and change management	OP Year 2025: "AI First approach" and tech/data/ AI in strategy focus; H1 2024: OP Aina launched on OP-mobile, stated aim to be AI pioneer; Year 2024: OP Aina usage milestones ⁵⁸	Digital channel adoption, contact-center productivity, fraud loss rates, NPS/CSAT, cost-to-income (inference) ⁵⁹
Increase ICT investment, particularly cybersecurity + data protection , while maintaining service quality	Financial institutions face heightened cyber threat and regulatory scrutiny; OP explicitly calls out increased investment	H1 2024 CEO text: "investing more in ICT, particularly...data protection and cybersecurity"; ICT investments section describing shared tech/ data/cyber responsibilities ¹²	Availability/incident rates, cyber event frequency, time-to-recover, audit findings; also change velocity (inference) ⁶⁰
Scale sustainable finance and CSRD/ ESRs-aligned sustainability management	Sustainability-linked products and portfolio decarbonization targets affect corporate and retail product innovation, risk, and reporting	H1 2024: ESRs/CSRD reporting shift; explicit financed-emissions targets by sector; green and sustainability-linked exposures disclosed (e.g., €7.9bn at 30 Jun 2024) ¹³	Sustainable finance volumes, financed emissions trajectory, risk-weighted assets (RWA) and capital buffers, product penetration (inference) ⁶¹

Full value chain / operating model map (Section 3)

The value chain below is tailored to OP's universal model (retail + corporate banking + insurance + asset management). Specific core system names are **not publicly evidenced** in the accessible sources and are therefore not assumed. ⁶¹

flowchart LR

```
A[Funding & Capital\nDeposits, wholesale funding, capital buffers] --> B[Product & Risk Design\nPricing, underwriting, risk models]
B --> C[Origination & Servicing\nRetail + corporate lending, payments, onboarding]
C --> D[Insurance Lifecycle\nUnderwriting, claims, fraud controls]
C --> E[Wealth & Asset Mgmt\nFunds, discretionary, advisory]
D --> F[Customer Channels\nOP mobile/digital, branches, contact centers]
E --> F
F --> G[Back Office & Controls\nFinance, compliance, AML, reporting]
G --> H[Technology/Data/Cyber\nShared platforms, data governance, security]
```

Key workflows and implications (select highlights):

Customer channels and AI assistants are explicitly in play: OP Aina is positioned as a 24/7 assistant in OP-mobile, supporting banking and insurance interactions; this implies strong requirements for **identity, consent, data access controls, auditability, and safe-handling of sensitive financial/insurance data**. ⁶²

OP's reporting emphasizes shared group responsibility for digital channels, technology, data and cybersecurity and quantifies development expenditure, meaning the **run/change spend mix** will be a live executive topic. ⁵⁵

Sustainability and sustainable finance are operationalized (products, targets, reporting under ESRS/CSRD), implying sizable data lineage needs across loan books, investment assets, and third-party data sources. ¹³

Publicly evidenced systems/platforms: OP-mobile; OP Aina (customer AI assistant). ⁶²

Not publicly evidenced (in accessible sources): core banking platform name(s), enterprise data platform vendor, AML platform vendor, contact center stack.

Strategic opportunity areas for TCS (Section 4)

Because TCS relationship evidence is weak, these are **workshop hypotheses** framed as "TCS Finland engagement possibilities," not as extensions of an existing contract.

Opportunity: Responsible AI operating model for a regulated universal financial-services group

Situation: OP has adopted an **AI First** stance and is deploying AI assistants, while also updating responsible AI policies. ¹⁷

Complication: Scaling GenAI/agents in banking/insurance requires model risk management, privacy, third-party controls, and explainability, without slowing product delivery. ⁶³

Resolution hypothesis: Establish a bank-grade "AI factory" and governance layer that standardizes intake, risk classification, evaluation, monitoring, and secure deployment patterns, tied to prioritized value streams (fraud, service, credit). (Informed inference grounded in OP's explicit AI ambition and responsible AI policy updates.) ⁶³

Business value at stake: measurable productivity uplift in service functions + reduced fraud losses + faster

digital feature delivery (inference). 59

Likely buyer/sponsor: Group CIO/CTO functions, Chief Risk Officer/Compliance, heads of channels. (Inferred from OP's emphasis on shared tech/data/cyber capabilities.) 55

Why TCS is credible: Nordic proven delivery + regulated-industry AI + run/transform operating models (capability claim; not customer-specific evidence here).

Opportunity: Cyber resilience and identity-driven customer trust program

Situation: OP explicitly increases ICT investment in data protection/cybersecurity; financial sector resilience is elevated. 12

Complication: Security controls can slow business delivery; channel growth increases attack surface. 64

Resolution hypothesis: A "secure-by-design" SDLC + identity and privileged access modernization + observability/SOC modernization aligned to business KPIs. (Informed inference.) 60

Value at stake: reduced incident cost, reduced regulatory exposure, improved release velocity (inference).

65

Likely sponsor: CISO, CIO, COO. (Inference.)

Opportunity: Sustainable finance data lineage and reporting industrialization

Situation: OP reports ERSR/CSRD alignment and financed emissions targets, and discloses sustainable finance exposures. 13

Complication: ESG data is heterogeneous, external, and audit-heavy; misreporting has reputational and regulatory risk. 13

Resolution hypothesis: Data lineage + controls over ESG data pipelines, integrating financed emissions calculations, product qualification logic (e.g., green loans), and audit-ready reporting. (Informed inference.)

13

Value at stake: lower reporting cost, faster product innovation in sustainable finance, reduced audit risk (inference). 13

Likely sponsor: CFO/Chief Sustainability, Risk, Data office. (Inference.)

AI, GenAI, and agentic AI opportunities (Section 5)

These are framed with strict maturity classification.

A) Business AI opportunities

Confirmed initiatives include OP Aina; most others are informed inferences.

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
Customer AI assistant expansion (from OP Aina) to proactive servicing (payments, card security, insurance tasks)	High customer expectations + need for 24/7 service	OP-mobile channel, customer profile/ transactions, policy/claims data (some inferred) ⁶²	Reduced call volume, improved CX, earlier issue prevention (inference) ⁶⁶	Model + privacy + consent + auditability	Confirmed direction (OP Aina exists) ⁶⁷
AI-assisted financial crime/fraud signals (cross-channel)	Rising fraud and cyber threat (implied by increased cyber focus) ⁶⁸	Transaction data, device/ network signals, case management (not publicly evidenced)	Lower fraud loss, faster investigations (inference)	High model risk; explainability	Informed inference

B) IT / operations AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
AI-driven service desk/IT support agent	Productivity and speed; OP is investing in ICT and AI competencies ⁶⁶	ITSM, knowledge base; identity and endpoint telemetry (not publicly evidenced)	Faster MTTR, higher employee satisfaction (inference)	Data leakage from tickets/ KB	Informed inference

C) Agentic AI opportunities (only where plausible)

Agentic AI is plausible in **controlled, multi-step workflows** (e.g., dispute resolution, address change + product bundling) but requires strict guardrails.

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
“Banking task agent” orchestrating multi-step servicing (e.g., card dispute → notifications → temporary limits → case creation)	Service friction and 24/7 needs	Digital channels + workflow engine/ITSM + policy rules (not publicly evidenced)	Reduced cycle time; consistent compliance steps (inference)	High: incorrect actions; must use human-in-the-loop	Informed inference

Top key problem statements (Section 6)

OP’s own reporting supports the “AI + security + sustainable finance + cost” pressure set; problem statements reflect that.

- 1) How do we scale **AI First** across customer and employee journeys while meeting banking/insurance expectations for auditability, privacy, and trust? ⁶⁹
- 2) How do we increase **cyber resilience and data protection** while keeping digital delivery fast and continuously available? ⁷⁰
- 3) How do we industrialize **sustainable finance data** (targets, product qualification, reporting) with audit-grade lineage under ESRS/CSRD? ¹³
- 4) How do we maintain profitability and manage cost-to-income pressure while increasing ICT investment and funding transformation? ⁷¹

TCS engagement angle (Section 7)

Strongest why-now: OP is publicly “AI First” and increasing ICT investment; workshops that connect **AI value to controls and operating model** should resonate. ⁷²

Best-fit TCS capabilities (hypothesis): Responsible AI/GenAI governance, cloud+data modernization, cybersecurity, operating-model transformation (SIAM/AIOps), customer experience engineering. (Capability mapping; not customer-specific evidence.)

Likely executive entry points: CIO/CTO org, CISO, heads of channels, CFO/Chief Sustainability. (Inference rooted in OP statements about shared tech/data/cyber responsibilities.) ⁵⁵

One sharp C-suite workshop opener: “You’ve committed to AI First—what are the **two customer journeys and two internal processes** where you want AI to measurably change cost, risk, and experience by 2027, and what control framework will make the board comfortable?” ¹⁷

Suggested workshop themes: (1) AI First with bank-grade controls; (2) Cyber resilience + modernization funding model. ⁷³

Workshop relevance summary (Section 8)

Why in top-6: OP is Finland’s largest financial-services provider with explicit AI ambition and rising ICT/cyber investment, making it a high-leverage reference workshop even if treated as a strategic target. ⁷⁴

What the workshop should unlock: an executive-aligned “AI First operating model” roadmap tied to 2–3 priority value streams, with governance and cost-to-value discipline. ⁷⁵

One-sentence takeaway: **OP’s challenge is not adopting AI—it’s scaling AI as a regulated operating-model change without eroding trust, security, or financial discipline.** ⁷⁶

Evidence gaps to close (explicit): core platform vendors (core banking/AML), enterprise data platform architecture, current SI/outsourcing ecosystem at group level, and any internal OP-TCS delivery footprint (if it exists). Primary annual report PDFs were not retrievable here due to fetch errors/timeouts from the host, so strategy detail relies on interim/half-year and OP Year summaries. ⁷⁷

Euroclear Finland

Relationship status (TCS Finland): confirmed TCS customer. TCS publicly states it enabled Euroclear Finland (Finland's national CSD) to integrate its core platform with ECB's T2S using **TCS BaNCS for Market Infrastructure**. ²¹

Company overview (Section 1)

Euroclear Finland is Finland's central securities depository (CSD) and part of Euroclear Group; it provides the Finnish book-entry system and related issuance, settlement, and asset servicing. ⁷⁸

Scale signals (Finland-specific): Euroclear Finland reports ~€490bn in securities under custody and **~2.5 million digital book-entry accounts**; TCS press release cites **€500bn in equity and debenture assets** in **~2.3 million accounts** (difference likely rounding/time). ⁷⁹

Key structural move: **T2S migration**—Euroclear Finland states that since 11 Sep 2023 Finnish securities in its register settle on T2S. ⁸⁰

TCS describes a longer transformation arc: replacing multiple legacy systems with a single settlement/custody platform ("Infinity") and a decade-long multi-phase transformation journey culminating in core platform integration with T2S. ²¹

Transformation-relevant leadership: Euroclear Finland CEO **Hanna Vainio** is quoted in both Euroclear Finland communications and TCS press release. ²⁰

Confirmed strategic priorities for the next 24–36 months (Section 2)

Two layers matter: Euroclear Finland (market infrastructure execution) and Euroclear Group (strategic direction, innovation posture).

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
Industrialize benefits of T2S integration: efficiency, liquidity, collateral simplification, cross-border settlement ease	T2S is explicitly framed as reducing fragmentation/risk and enabling longer trading hours; next phase is operational excellence and market adoption	Euroclear Finland T2S migration statement; TCS press release describing cross-border settlement cost/risk reductions and centralized cash account benefits ²⁰	STP rate, settlement fails, participant operating cost, onboarding time (inference) ¹⁹
Continue platform modernization on a standards-based single core (TCS BaNCS; Infinity)	Maintaining and evolving a harmonized platform is the base for safety and change agility	TCS: core based on TCS BaNCS; Infinity single platform; co-existence for ISO 15022/20022 described ²¹	Change lead time, incidents, operating cost, new service time-to-market (inference) ²¹

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
Expand innovation/resilience posture, including responsible AI/automation at group level	Euroclear group explicitly talks about AI deployment (Copilot, EVIA assistant) and DLT exploration; FMI needs innovation without risk	Euroclear Holding Annual Report 2024: Copilot deployed companywide; EVIA assistant; DLT experiments and innovation pace ⁸¹	Client experience metrics, operational productivity, risk reductions (inference) ⁸²

Full value chain / operating model map (Section 3)

Euroclear Finland's value chain is post-trade infrastructure centered on issuance/registry, custody, settlement, and asset servicing.

flowchart LR

```

A[Onboarding & Governance\nRulebooks, participant admission, compliance] -->
B[Primary Issuance\nISIN/numbering, issuance setup]
B --> C[Central Registry & Custody\nBook-entry accounts, holdings]
C --> D[Settlement Engine\nT2S settlement, cash/securities legs]
D --> E[Asset Servicing\nCorporate actions, income, tax services]
E --> F[Issuer/Investor Services\nGeneral meetings, ownership info products]
F --> G[Operations & Resilience\nMonitoring, incident mgmt, continuity]
G --> H[Data & Interfaces\nISO messaging, participant connectivity]

```

Key workflows and publicly evidenced platforms/data assets:

Core settlement/custody platform: TCS states Euroclear Finland's core platform is based on **TCS BaNCS for Market Infrastructure**, integrated with T2S; it also references a standards-based platform named **Infinity** earlier in the transformation. ²¹

Settlement backbone: Euroclear Finland confirms settlement on **ECB T2S** since Sep 2023; TCS describes the benefits and market scope (T2S ecosystem). ²⁰

Ownership/registry data: Euroclear Finland emphasizes real-time ownership data, public shareholder registers, and digital book-entry accounts. ²⁵

Named services: Euroclear Finland lists "Insider Elements" and "InvestorInsight" for insider data and foreign ownership data, plus general meeting services and automated corporate actions. ⁸³

Regulatory context: FIN-FSA notes Finland has one CSD (Euroclear Finland) licensed as a Finnish limited company under CSD supervision principles. ⁸⁴

Pain points/complexity drivers (evidenced + inference):

Market migrations and standards changes create ecosystem-wide testing and adoption burden; ECB Finnish market scoreboard notes ECMS-related community testing involving Euroclear Finland and Bank of Finland (context for ongoing market-structure change management). ⁸⁵

Cross-border settlement efficiency is explicitly a driver (reduce fragmentation, liquidity improvements). ²⁰

Data protection/GDPR obligations are explicitly referenced by Euroclear Finland. ⁸³

Strategic opportunity areas for TCS (Section 4)

Because TCS is already publicly evidenced as the core platform partner, these opportunities are framed as the “next horizon” after T2S and core consolidation.

Opportunity: Post-T2S “operating leverage” program—reduce cost-to-serve for participants

Situation: T2S integration achieved; platform positioned as modern and standards-based. ¹⁹

Complication: Market participants still bear high change/adaptation costs (interfaces, reconciliations, exceptions). (Informed inference anchored in market-migration reality and testing signals.) ⁸⁶

Resolution hypothesis: Deploy end-to-end observability + exception automation + participant-facing tooling to reduce fails and manual repairs.

Business value at stake: fewer fails/penalties, lower ops cost, higher market attractiveness (inference; aligned to stated goal of attracting investment). ²¹

Likely sponsor: CEO/COO of Euroclear Finland; heads of settlement ops; key participant banks. ⁷⁹

Why TCS credible: TCS BaNCS platform ownership and integration experience in this environment is explicitly evidenced. ²¹

Opportunity: Corporate actions modernization and standards evolution

Situation: Euroclear Finland highlights automated corporate-action processing; Euroclear group emphasizes AI automation and process streamlining. ⁸⁷

Complication: Corporate actions remain industry-wide friction due to cascades, exceptions, and data quality. (Informed inference.)

Resolution hypothesis: Expand STP via enriched data, automation, and “participant self-service” dashboards; align with evolving ISO 20022 direction where relevant (standards direction supported by Euroclear group context). ⁸⁸

Value at stake: reduced processing cost + improved investor experience (inference).

Sponsor: Head of asset servicing/corporate actions.

Opportunity: Productize ownership/registry data into compliant data services

Situation: Euroclear Finland positions itself as holding real-time ownership data and providing ownership information services. ²⁵

Complication: Balancing transparency with GDPR and market rules is non-trivial. ⁸³

Resolution hypothesis: “Data products” layer (APIs, entitlements, audit logging) enabling issuers, analysts, and intermediaries to consume data legally and efficiently. (Informed inference.)

Value at stake: new fee-based services + reduced manual inquiries (inference).

AI, GenAI, and agentic AI opportunities (Section 5)

A) Business AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
Client interaction assistant for participant support (Euroclear group “EVIA”-type pattern, adapted to Finland)	High inquiry load and complexity; desire to streamline processes	Knowledge base, participant tickets, rulebooks; strict access controls ⁸²	Faster resolution, fewer escalations (inference)	Confidentiality of market/participant data	Informed inference (AI assistant confirmed at group level) ⁸⁹
AI for corporate actions exception prediction	Exceptions drive friction (inference)	Corporate actions event data, messaging, settlement status (platform-level) ⁷⁹	Reduced exception volume; higher STP (inference)	Explainability; operational risk	Informed inference

B) IT / operations AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
AIOps for settlement platform + interfaces	Need resilience and fewer incidents	Logs/metrics/traces across platform and participant connectivity	Lower MTTR; proactive incident prevention (inference)	Model drift; change control	Informed inference (industry-standard; not explicitly stated for Finland)

C) Agentic AI opportunities (cautious)

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
Agent to orchestrate “exception resolution playbooks” (detect → classify → propose fix → human approval → execute)	Manual repairs and operational risk	Observability + runbooks + ticketing + access-controlled automation	Lower operational toil; consistent controls (inference)	High: must keep human-in-the-loop	Informed inference

Top key problem statements (Section 6)

- 1) How do we translate the T2S migration win into **sustained operating leverage**—lower cost-to-serve and fewer manual exceptions—without compromising resilience? ²⁰
- 2) How do we reduce ecosystem friction (testing, onboarding, standards evolution) for banks/issuers while keeping Finland attractive for capital? ²⁴
- 3) How do we expand ownership/issuer data services in a GDPR-safe way while increasing transparency and service value? ²⁵
- 4) How do we adopt AI/automation responsibly in FMI contexts where errors become systemic risk? (Informed inference, grounded in group AI posture and FMI risk profile.) ⁹⁰

TCS engagement angle (Section 7)

Strongest why-now: Euroclear Finland is on modern platforms (BaNCS + T2S); the next horizon is **operational excellence + data/AI productization** rather than another “big bang” migration. ¹⁹

Best-fit TCS capabilities: BaNCS MI roadmap, ISO messaging coexistence, test automation, AIOps/observability, data product engineering. ⁸⁸

Likely entry points: CEO/COO Euroclear Finland; heads of settlement/asset servicing; Euroclear group innovation/data leadership (inference from group AI/DLT agenda). ⁹¹

Competitive dynamics: not publicly detailed here; however FMI space typically involves platform vendors + specialist SIs (inference; gap).

C-suite workshop opener: “Now that Finland’s CSD is T2S-integrated, where are the **three biggest remaining sources of exceptions and participant effort**, and how do we eliminate them with automation + better data products?” ²⁴

Workshop themes: (1) Post-T2S operating leverage; (2) Data services + GDPR-safe productization. ⁷⁹

Workshop relevance summary (Section 8)

Why in top-6: Euroclear Finland is a national infrastructure asset with explicit modernization milestones; TCS has proven platform credibility here. ²⁴

What the workshop should unlock: a “**next horizon**” roadmap converting platform modernization into lower market friction and new data-driven services. ²⁴

One-sentence takeaway: **After T2S, the competitive edge shifts from platform replacement to exception elimination, ecosystem adoption, and compliant data-service innovation.** ⁹²

Evidence gaps to close: Finland-specific financials/headcount, named internal operating platforms beyond BaNCS/Infinity, participant pain-point telemetry (fails/exception taxonomy), and roadmap commitments beyond the migration milestone. ²⁴

Kesko

Relationship status (TCS Finland): confirmed TCS customer. Kesko names TCS as a **main strategic IT partner** in its largest IT services transformation; TCS confirms a multi-year partnership covering SAP S/4 transformation, digital development, AMS, and intelligent automation. ³⁵

Company overview (Section 1)

Kesko is a Finnish listed trading-sector company operating in grocery trade, building and technical trade, and car trade, with **~1,700 stores** in chain operations across Finland, Sweden, Norway, Denmark, Estonia, Latvia, Lithuania and Poland. ⁹³

2024 scale: Kesko reports **net sales €11,920.1m** and comparable operating profit **€650.1m** in 2024. ⁹⁴

Operating model: Kesko’s chain business model combines chain operations with K-retailer entrepreneurship; Kesko steers chain operations and purchasing, while retailers run store operations and local business execution. ⁹⁵

Transformation leadership: CFO (Anu Hämäläinen) and CIO (Arto Hiltunen) are quoted in the IT transformation announcement. ³⁵

Recent structural/strategic moves: strategy updated in spring 2024 for **2024–2026**; no portfolio changes planned, but competitive advantages and customer focus sharpened. ²⁸

IT transformation move: major consolidation of IT services to fewer strategic partners (TCS, CGI, Elisa, Futurice, Nitor, Fujitsu). ²⁹

Data/AI governance move: Kesko’s data balance sheet reports active work to build governance/processes for compliance with the EU AI Act (phased approach starting Aug 2026) and highlights NIS2/CER relevance. ³²

Confirmed strategic priorities for the next 24–36 months (Section 2)

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
Execute 2024–2026 strategy: profitable growth across three divisions with customer focus	Strategy horizon explicitly set; environment is challenging but improving; growth must be funded with discipline	Kesko strategy page; Board report context ²⁸	Net sales growth, operating profit, market share, ROCE ⁹⁶
Transform IT operating model and modernize core landscape (incl. SAP S/4) with fewer strategic partners	Kesko calls it “biggest IT services transformation” enabling AI, automation, and security; TCS selected as strategic IT partner	Kesko IT services transformation announcement; TCS press release on SAP S/4 and AI-enabled AMS ³⁵	IT run cost, change lead time, incident rates, SAP modernization milestones (inference) ²⁷
Scale data + AI for personalized multichannel CX, demand prediction, logistics efficiency, with responsible governance	Data balance sheet explicitly ties data/AI to personalization, demand prediction, and logistics; emphasizes security and AI Act readiness	Kesko data balance sheet report (2024); IT transformation enabling AI-based customer solutions and automation ⁹⁷	Waste reduction, availability, conversion, basket size, inventory turns (inference) ³³

Full value chain / operating model map (Section 3)

Kesko’s value chain is distinctive because it is both a wholesaler/chain operator and an orchestrator of retailer entrepreneurship.

```

B --> C[Distribution & Logistics\nDCs, replenishment, transport]
C --> D[Retail Execution\nK-retailer stores + owned retail formats]
D --> E[Digital & Omnichannel\nApps, e-commerce, click&collect, delivery]
E --> F[Loyalty & Data\nK-Plussa, analytics, personalization]
D --> G[After-sales & Services\nFoodservice (Kespro), car service, B2B]
F --> H[Support Functions\nFinance, HR, Legal, Security, IT]
H --> I[Core Platforms\nSAP + non-SAP, AMS, observability/AIOps]

```

Publicly evidenced platforms/systems: SAP modernization/SAP S/4 transformation is explicitly in scope in TCS announcement; TCS also references AI-enabled application managed services and **TCS ignio AIOps** with a unified operations model. ⁹⁸

Kesko's data balance sheet references "Kesko's data and analytics platform services" (platform name not specified) and emphasizes data protection, cybersecurity and digital architecture. ³²

Not publicly evidenced (avoid inventing): WMS/TMS vendor names, POS stack, e-commerce platform vendor, MDM tooling names.

Data assets and implications (confirmed + inference):

Kesko's data balance sheet frames data as strategic asset, including personalization, demand prediction, and logistics streamlining; it also highlights governance for AI Act compliance and NIS2/CER relevance—implying the workshop must connect AI value to governance/security architecture. ³²

The chain model explicitly uses customer data for store-specific business ideas and retailer decisioning, meaning data products must serve both **central chain functions and decentralized retailers**. ⁹⁵

Strategic opportunity areas for TCS (Section 4)

Given TCS's confirmed strategic IT partner role, these are framed as concrete agendas.

Opportunity: "SAP S/4 + retail execution" transformation without store/DC disruption

Situation: TCS partnership includes SAP S/4 transformation + hosting/modernization of SAP environments + end-to-end support for digital applications. ⁹⁸

Complication: Retail/logistics cannot pause; errors show up immediately in availability, waste, and customer experience. (Informed inference grounded in retail ops reality + Kesko emphasis on omnichannel and efficiency.) ⁹⁹

Resolution hypothesis: Use a phased, domain-based cutover plan with operational "control towers," test automation, and parallel-run for critical flows (pricing, replenishment, promotions, finance close).

Business value at stake: reduced transformation drag and avoided sales loss; faster cycle times for new capabilities (inference). ¹⁰⁰

Likely buyer/sponsor: CIO (Arto Hiltunen) + CFO + division heads for grocery/building/car. ¹⁰¹

Why TCS credible: "strategic IT partner" status and explicit SAP+AMS scope publicly stated. ²⁷

Opportunity: AI-powered operations model—shift from reactive support to predictive prevention

Situation: TCS proposes AI-enabled AMS and predictive incident management via ignio AIOps; Kesko wants more automation and agility. ²⁷

Complication: Retail tech estates are hybrid (SAP + many satellite apps); AIOps needs clean telemetry and clear ownership to avoid "automation chaos." (Informed inference.)

Resolution hypothesis: Unified observability + service ownership mapping + automation guardrails, linked to business KPIs (availability, checkout latency, DC throughput).

Value at stake: fewer outages, lower run cost, improved productivity. (Inferred, aligned to partnership goals)

to save costs and improve quality.) 102

Sponsor: CIO/Head of IT Ops.

Opportunity: Data governance + AI Act readiness as an accelerator (not a brake)

Situation: Kesko is building governance/processes for AI Act compliance starting Aug 2026 and highlights NIS2/CER relevance; it also emphasizes responsible data use. 103

Complication: Compliance programs often slow delivery unless integrated into product teams and tooling. (Informed inference.)

Resolution hypothesis: “Compliance-by-design” patterns: model registry + risk classification + data lineage + security controls baked into pipelines and MLOps.

Value at stake: faster safe deployment; lower regulatory risk. 32

Sponsor: Legal/Sustainability + Security + Data leadership. 32

AI, GenAI, and agentic AI opportunities (Section 5)

A) Business AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
Personalized multichannel recommendations and promotions (retailer + chain)	Need for customer-centric growth and differentiation	Loyalty/ customer data + digital channels + product master + promo history 104	Higher conversion/ basket, improved loyalty (inference)	Consent, bias, transparency	Confirmed direction (explicit personalization + AI analytics) 32
Demand forecasting + assortment optimization	Waste, availability pressure	Sales history + inventory + supplier lead times + local signals 32	Reduced waste; better availability (explicitly referenced) 32	Model drift; explainability	Confirmed direction 32
Logistics optimization (slotting, routing, labor planning)	Efficiency and speed in logistics	DC/WMS data (vendor not evidenced), order data, store demand signals	Faster throughput; lower cost (inference)	Safety and labor constraints	Confirmed direction (logistics streamlining explicitly mentioned) 32

B) IT / operations AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
AIOps + predictive incident mgmt across SAP + non-SAP	Improve quality and save costs; reduce incidents	Telemetry + APM + ITSM; ignio framework ⁹⁸	Lower MTTR; fewer outages	Automation guardrails	Confirmed initiative (in TCS scope) ⁹⁸
GenAI copilots for service desk / dev productivity	Speed of change in multi-partner model	Ticket/KB + code repos (not publicly evidenced)	Productivity uplift (inference)	IP leakage	Informed inference (not explicitly stated)

C) Agentic AI opportunities (high-value orchestration)

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
"Promotion-to-shelf" agent orchestrating promo setup → pricing rules → replenishment → monitoring	Promo execution complexity across channels	SAP + pricing + inventory + analytics platform (names not evidenced) ¹⁰⁵	Fewer execution failures; faster cycle (inference)	High control needs; safety	Informed inference

Top key problem statements (Section 6)

- 1) How do we modernize our core tech landscape (SAP and beyond) **without disrupting store, e-commerce, and logistics execution?** ³¹
- 2) How do we make data and AI a repeatable advantage—**personalization, demand prediction, and logistics efficiency**—while remaining responsible and secure? ¹⁰³
- 3) How do we ensure a multi-partner IT model delivers a single coherent outcome (quality, security, speed), not fragmentation? ³⁵
- 4) How do we build AI Act readiness into delivery starting 2026 so compliance accelerates adoption rather than constraining it? ³²
- 5) How do we reduce waste and improve availability while operating in a still-challenging macro environment? ¹⁰⁰

TCS engagement angle (Section 7)

Strongest why-now: Kesko explicitly frames this as its biggest IT transformation, and TCS is already selected as strategic partner. ³⁵

Best-fit TCS service lines: SAP S/4, AMS + AIOps (ignio), cloud modernization, data/AI engineering, cyber security, integration services. ³

Likely executive entry points: CIO (Arto Hiltunen), CFO, division Presidents. ¹⁰¹

Incumbents/partners: Kesko publicly lists key partners (TCS, CGI, Elisa, Futurice, Nitor, Fujitsu). ²⁹
 C-suite workshop opener: “If this is the biggest IT transformation in Kesko’s history, how do we define—by 2027—the **non-negotiable business outcomes** (availability, waste, speed-to-market) and engineer the program to deliver them continuously?” ¹⁰⁶
 Suggested workshop themes: (1) SAP S/4 + digital core roadmap with business-value gates; (2) AI industrialization under AI Act/NIS2 with a data-product operating model. ³⁴

Workshop relevance summary (Section 8)

Why in top-6: It is a high-scale Finnish retailer with explicit data/AI strategy and an ongoing, publicly announced major IT transformation with TCS as strategic partner. ¹⁰⁷
 What to unlock: agreed “value threads” (availability/waste/CX) + a transformation control model that keeps business execution safe while modernizing. ⁹⁹
 One-sentence takeaway: **Kesko is positioned to convert data/AI into retail execution advantage—but only if SAP+platform modernization and AI governance are engineered as one operating model.** ³⁴

Evidence gaps to close: named platforms for e-commerce, WMS/TMS, pricing engine details, and program scope boundaries across partner ecosystem (what is owned by each). ³⁵

DNA

Relationship status (TCS Finland): confirmed TCS customer. TCS announces a **five-year partnership** with DNA to accelerate cloud transformation and migrate up to **80% of enterprise apps to public cloud by 2030**, building on a **17-year collaboration**. ⁴

Company overview (Section 1)

DNA is a leading Finnish telecom provider offering mobile, broadband, fixed line, and TV services; it is part of Telenor Group. ¹⁰⁸
 Scale (from TCS customer-specific press release, considered credible tier-2 evidence): DNA has **~3.7 million subscriptions, €1.1bn revenue in 2024**, and **~1,600 employees** around Finland. ⁴
 DNA’s public reporting changed after its bond maturity and end of disclosure obligation; it notes that official figures are reported via Telenor ASA and that it no longer publishes stock exchange releases and official financial reports, but maintains a public archive of key publications. ¹⁰⁹
 Strategic context from the latest accessible DNA annual report (2023) includes focus on network quality, customer experience, and preparedness/continuity planning (older but still informative). ¹¹⁰

Confirmed strategic priorities for the next 24–36 months (Section 2)

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
“Journey to the Cloud”: migrate up to 80% of enterprise apps to public cloud by 2030; 100+ apps in 24 months	DNA positions cloud adoption as essential; quantified, time-bound migration plan	TCS–DNA press release: 80% by 2030, 100+ apps in 24 months, cloud migration factory model ⁴	App run cost, change velocity, reliability incidents (inference) ⁴

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
Build cloud-based data platform to make AI services practical	DNA CEO explicitly states AI services are “practically impossible” without cloud-based data platform	CEO quote in TCS press release ⁴	Time to deploy AI use cases; data latency; AI adoption (inference) ⁴
Maintain security, resilience, and customer experience at scale	Telecom criticality + large data volumes; DNA links customer experience and operational efficiency goals to cloud program	TCS press release goals; DNA 2023 report emphasizes preparedness and security context (background) ³⁷	Network/service availability, churn, complaint rates, EPSI customer satisfaction (inference) ³⁶

Full value chain / operating model map (Section 3)

Telecom value chain highlights where cloud and AI are “make-or-break”: customer experience, BSS/OSS agility, and network-data exploitation.

flowchart LR

```

A[Network Build & Run\n5G/fiber backbone, access, core] --> B[Service Enablement\nOSS/BSS, provisioning, assurance]
B --> C[Product & Pricing\nBundles, devices, enterprise offers]
C --> D[Sales & Channels\nDigital, retail, partners]
D --> E[Customer Care\nContact center, self-service]
B --> F[Billing & Revenue Mgmt\nCharging, invoicing, collections]
A --> G[Security & Resilience\nSOC, fraud prevention, continuity]
H[Enterprise IT Apps\nHR/Finance/CRM/etc] --> I[Cloud & Data Platform\nGoogle Cloud migration factory]
I --> E
I --> B

```

Publicly evidenced systems/partners:

Google Cloud is explicitly named as the initial migration target (100+ apps in 24 months) and as the base for TCS Migration Factory; TCS Cloud Counsel and TCS Migration Factory are cited as tools. ⁴

Not publicly evidenced: DNA’s specific BSS/OSS vendor stack, network analytics platforms, CDP/CRM tooling.

Data assets with implications:

DNA explicitly states it has millions of customers and enormous data volume; cloud adoption is positioned as essential for AI services—implying that **data platform architecture, governance, and FinOps** are core to the business case. ⁴

Strategic opportunity areas for TCS (Section 4)

Opportunity: Cloud migration factory execution with reliability guardrails

Situation: 80% enterprise apps to public cloud by 2030; 100+ apps in 24 months; nearshore factory in Portugal. ⁴

Complication: Migration at this pace risks outages, security regressions, and cost blow-outs; telecom operations must remain stable. (Informed inference.) ³⁷

Resolution hypothesis: A “migration control tower” with standardized landing zones, automated testing, security baselines, and cutover playbooks, integrated with business continuity.

Business value at stake: cost optimization + speed and innovation + reduced operational incidents (aligned to stated goals). ⁴

Likely sponsor: CTO (Sari Leppänen), CIO/Enterprise IT, COO for operations. ⁴

Why TCS credible: The partnership already assigns TCS leadership role and tools; long-standing collaboration is explicitly stated. ⁴

Opportunity: AI-ready data platform operating model

Situation: DNA CEO links AI viability to cloud-based data platform. ⁴

Complication: Without governance, platform becomes a cost center rather than an AI enabler. (Informed inference.)

Resolution hypothesis: Domain-oriented data products (customer, network, finance) with quality SLAs and privacy controls; MLOps and feature store patterns.

Value at stake: faster rollout of AI-enabled customer/service features (inference). ⁴

Sponsor: CTO + data leaders.

Opportunity: Security-by-design for cloud migration and operations

Situation: Telecom security and fraud are emphasized in DNA reporting context; cloud migration expands attack surface. ³⁶

Resolution hypothesis: Cloud security posture management + IAM modernization + automated compliance. (Informed inference.)

AI, GenAI, and agentic AI opportunities (Section 5)

A) Business AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
AI-driven customer support and self-service	Customer scale + service cost pressure	Customer interaction data + KB + channel integration	Lower cost-to-serve, faster resolution (inference)	Data privacy	Informed inference
AI for churn/upsell and next-best-action	Competitive market + CX focus (context) ¹¹⁰	Customer usage + offers + channel data	Improved retention (inference)	Bias, transparency	Informed inference

B) IT / operations AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
Cloud FinOps automation + anomaly detection	Cloud migration cost optimization target	Billing and usage telemetry	Lower cloud spend variance (inference)	False positives	Informed inference
AIOps for application estate in cloud	Scale of migration and change	Logs/ metrics/ traces + ITSM	Lower MTTR, fewer incidents (inference)	Automation guardrails	Informed inference

C) Agentic AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/ governance	Maturity
Agentic “migration assistant” orchestrating discovery → dependency mapping → test creation → cutover runbook drafting	Speed requirement; 100+ apps in 24 months	App inventories, CMDB, CI/CD, test frameworks	Faster migration cycles (inference)	High: must be controlled	Informed inference, aligned to factory model ⁴

Top key problem statements (Section 6)

- 1) How do we migrate 80% of enterprise apps to public cloud by 2030 while sustaining telecom-grade reliability and security? ⁴
- 2) How do we build a cloud-based data platform that makes AI services operationally feasible and economically justified? ⁴
- 3) How do we avoid cloud cost sprawl while scaling modernization at speed? (Informed inference aligned to “cost optimization” objective.) ⁴
- 4) How do we industrialize change (testing, compliance, release) so migration doesn’t create a backlog and operational toil? (Informed inference.) ⁴

TCS engagement angle (Section 7)

Strongest why-now: quantified scope, timeline, and factory model with TCS leadership role. ⁴

Best-fit TCS capabilities: cloud migration factory, Google Cloud engineering, modernization, DevSecOps, AIOps, IT service management transformation. ⁴

Likely executive entry points: CEO, CTO, Procurement (Telenor procurement is quoted), enterprise IT leadership. ⁴

Competitive dynamics: hyperscaler ecosystem + telecom SIs (not publicly detailed; gap).

Workshop opener: “You’ve quantified the move—80% apps to public cloud by 2030. What are the **three non-negotiable reliability and cost metrics** that must improve in parallel, and how will the migration

factory enforce them?" 4

Workshop themes: (1) Migration control tower and risk-managed acceleration; (2) AI-ready data platform and operational model. 4

Workshop relevance summary (Section 8)

Why in top-6: one of the clearest, quantified IT transformations in Finland telecom with strong TCS relationship evidence. 4

What to unlock: execution certainty + a crisp AI/value narrative beyond "cloud migration." 4

One-sentence takeaway: **DNA is treating cloud as the prerequisite for AI and efficiency—so the workshop must connect migration execution to measurable CX and cost outcomes.** 4

Evidence gaps to close: DNA's current enterprise app portfolio segmentation, OSS/BSS modernization dependencies, baseline cloud readiness and security posture, and operational KPIs for the migration. 37

UPM

Relationship status (TCS Finland): confirmed TCS customer. TCS announces an agreement to drive end-to-end IT transformation of UPM, deploying **ignio** and delivering services including service desk, workspace, network/connectivity, hybrid cloud, and SIAM. 38

Company overview (Section 1)

UPM is a Finland-headquartered material solutions company with a portfolio across renewable fibres, advanced materials, decarbonization solutions, and communication papers; it operates production facilities in multiple countries (TCS press release states 11 countries). 111

Scale: UPM's 2024 sales were **€10,339m** and avg employees **16,282** (end of 2024: 15,827) per financial statements release; TCS press release states annual sales approx **€10.3bn** and **15,800 employees.** 112

Major investment context: Leuna biochemicals biorefinery investment estimate **€1,275m**, with integrated commercial production expected to start in H2 2025 and full production/positive EBIT by 2027 (per 2024 release). 113

Strategic portfolio moves (2025 annual report): intended graphic paper joint venture with Sappi (expected close by end-2026 subject to approvals) and strategic review of UPM Plywood. 39

Recent milestone (late 2025): UPM reports Leuna biorefinery started production/commercialization of industrial sugars and expects to enter market with further products in H1 2026. 114

Transformation-relevant leadership: UPM CIO **Turkka Keskinen** is quoted in TCS press release about building a human-centric, business-oriented IT infrastructure. 38

Confirmed strategic priorities for the next 24–36 months (Section 2)

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
End-to-end IT transformation toward AI-first operating model + continuity	UPM explicitly seeks “effortless IT” that is scalable, cost-effective, AI/automation-enabled; TCS contracted to deliver	TCS press release: ignio deployment + SIAM + hybrid cloud + end-user experience ³⁸	IT service reliability, employee experience, run cost, time-to-market (inference) ³⁸
Execute portfolio transformation initiatives (JV, strategic review)	Portfolio moves change complexity and require integrated IT foundations and carve/separate capabilities	UPM Annual Report 2025: JV expected close by end-2026; strategic review of plywood ³⁹	Separation readiness, TSAs avoided, synergy realization (inference) ³⁹
Scale next-gen renewables/ biochemicals (Leuna ramp-up + products in 2026)	Growth engine needs robust processes/systems for quality, supply chain, commercialization	Leuna milestone press release; 2024 capex/investment details with production timelines ⁴⁰	Ramp-up yield, OEE, safety, time-to-revenue (inference) ¹¹⁴

Full value chain / operating model map (Section 3)

UPM's value chain spans forestry feedstocks through industrial production and global sales.

flowchart LR

```

A[Renewable feedstock & sourcing\nForests, wood, sustainability controls] -->
B[Industrial production\nMills, biorefineries, converting]
B --> C[Quality & compliance\nProduct specs, safety, sustainability reporting]
C --> D[Logistics & distribution\nPorts, shipping, warehousing]
D --> E[Commercialization\nB2B sales, customer contracts, innovation]
E --> F[Portfolio mgmt\nJV/separation initiatives, capital allocation]
F --> G[Digital foundation\nEnd-to-end IT, SIAM, hybrid cloud, service desk]

```

Publicly evidenced platforms/systems:

TCS will deploy **ignio** and provide SIAM, hybrid cloud, network/connectivity, end-user services, and business/platform application services. ³⁸

Not publicly evidenced: ERP vendor(s), manufacturing execution systems, lab systems, supply chain platforms.

Data assets and implications:

Leuna commercialization and new products imply heavy requirements for process data, quality data, and customer qualification pipelines (UPM references customer contracts and pipeline). ¹¹⁵

Portfolio initiatives imply complexity in data separation, reporting, and controls (inference; grounded in announced JV/review timelines). ³⁹

Strategic opportunity areas for TCS (Section 4)

Opportunity: “IT value chain simplification” with SIAM + AI operations as the lever

Situation: UPM wants cost-effective, scalable IT with end-to-end accountability; TCS is contracted for SIAM and broad services. ³⁸

Complication: Multi-business portfolio and global footprint amplify run complexity; transformations often fail due to unclear ownership and fragmented tooling. (Informed inference.) ¹¹⁶

Resolution hypothesis: Build a unified command model, service ownership, and experience-based measurement (explicitly referenced by TCS) to reduce operational complexity and stabilize service quality. ³⁸

Value at stake: cost savings + faster time-to-market (explicit goals). ³⁸

Sponsor: CIO + COO.

Opportunity: Separation readiness / portfolio initiative digital execution

Situation: Graphic paper JV expected close by end-2026; plywood strategic review underway. ³⁹

Complication: Carve-outs create urgent needs: identity, ERP boundaries, data extraction, reporting continuity. (Informed inference.)

Resolution hypothesis: “Separation-by-design” blueprint with data and app disentanglement patterns, minimizing TSAs and business disruption.

Opportunity: Digital enablement of Leuna scale-up

Situation: Leuna ramps; UPM expects more products in H1 2026 and full production later. ⁴⁰

Resolution hypothesis: Digital operations + analytics for ramp-up reliability, quality deviation management, and supply chain readiness (informed inference).

AI, GenAI, and agentic AI opportunities (Section 5)

A) Business AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
Ramp-up analytics for biochemicals/ renewables	First-of-its-kind processes, ramp-up timelines	Process + quality + maintenance data (systems not evidenced) ¹¹⁵	Faster stabilization, fewer quality losses (inference)	Safety, model validation	Informed inference
Commercial pipeline analytics for new products	Customer qualification pipeline referenced	CRM + contract + product qualification status (not evidenced) ¹¹⁵	Faster conversion (inference)	Data quality	Informed inference

B) IT / operations AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
ignio-driven autonomous ops across IT estate	Need for AI-first operating model and continuity	IT telemetry + ITSM + runbooks	Higher reliability, automation, cost saving	Automation governance	Confirmed initiative 38
Employee-experience AI (digital workplace)	Improve employee digital experience	Workspace telemetry + support data	Productivity uplift (inference)	Privacy	Confirmed direction (stated intent) 38

C) Agentic AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/governance	Maturity
Agentic “IT change agent” orchestrating incidents → root cause → remediation steps across hybrid cloud	Complexity across hybrid estate	Observability + ITSM + automation	Reduced toil (inference)	Must constrain actions	Informed inference grounded in ignio/autonomous ops theme 38

Top key problem statements (Section 6)

- 1) How do we transform the IT value chain for a global industrial company so IT becomes “effortless,” cost-effective, and accountable end-to-end? 38
- 2) How do we execute portfolio transformation (JV/review) while maintaining data/reporting continuity and minimizing separation drag? 39
- 3) How do we support the digital needs of scaling biochemicals/renewables (quality, supply chain, commercialization) during ramp-up? 40
- 4) How do we measure digital transformation outcomes in an experience-based, business-aligned way rather than technical outputs? (TCS explicitly highlights the shift.) 38

TCS engagement angle (Section 7)

Strongest why-now: signed end-to-end IT transformation agreement; time window aligns with portfolio and operational milestones through 2026–2027. 117

Best-fit TCS service lines: SIAM, hybrid cloud ops, network and workplace, AIOps/ignio, application services, security. 38

Entry points: CIO + enterprise services leadership; business leaders in renewables/biochemicals (inference based on Leuna strategic importance). 40

Workshop opener: “If we treat IT transformation as enabling the ‘future beyond fossils’, which two value chains (e.g., Leuna scale-up and portfolio separation) should IT measurably accelerate by 2027, and what capabilities must be standardized globally?” 118

Workshop themes: (1) IT value chain and experience-based outcomes; (2) Separation readiness + digital enablement for growth platforms. ⁴²

Workshop relevance summary (Section 8)

Why in top-6: strong Finnish anchor, explicit TCS partnership, and high transformation stakes tied to both portfolio initiatives and operational scale-up. ¹¹⁸

What to unlock: connect IT transformation to 2–3 concrete business “growth and change” agendas (biochemicals, portfolio moves, productivity). ⁴²

One-sentence takeaway: **UPM’s digital foundation must reduce complexity and accelerate portfolio+renewables strategy—IT excellence is now a growth enabler, not just a cost center.** ¹¹⁹

Evidence gaps to close: named enterprise platforms, separation architecture plans, manufacturing digital stack, and quantified IT baseline KPIs to measure transformation impact. ¹²⁰

Kalmar

Relationship status (TCS Finland): confirmed TCS customer. TCS states Kalmar selected TCS as strategic IT partner in 2026 to consolidate and transform global IT into a single integrated service delivery model with AI-driven operations. ⁴⁷

Company overview (Section 1)

Kalmar is a Helsinki-headquartered global provider of heavy material handling equipment and services, operating in over 120 countries; its vision is to be the forerunner in sustainable material handling equipment and services. ¹²¹

Structural move: Kalmar became an independent listed company via partial demerger from Cargotec; trading in Kalmar B shares began **1 July 2024**. ¹²²

Scale: 2024 sales were **€1,720m**; the firm employs approximately **5,200 people** (TCS press release). ¹²³

Operating model: Kalmar reports two segments—Equipment and Services—and emphasizes a strategic focus on sustainable innovations, growing services, and driving excellence. ¹²⁴

Efficiency program: Kalmar targets **~€50m gross efficiency improvements by end of 2026** under its Driving Excellence initiative to support 2028 profitability targets. ⁴⁵

Technology direction: key investment areas include **electrification, automation, and digitalisation**, with proprietary connectivity solutions enabling real-time equipment data; Kalmar notes software/analytics/AI used to help customers solve safety, productivity, and sustainability challenges. ¹²⁵

Confirmed strategic priorities for the next 24–36 months (Section 2)

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
Deliver post-separation efficiency gains (Driving Excellence; €50m by end-2026)	Independence increases pressure to fund innovation and hit margin targets through efficiency	Kalmar Annual Report 2024: €50m by end-2026; performance targets to 2028 ⁴⁵	Operating margin, cost base, lead times ⁴⁵

Confirmed priority	Why it matters now	Evidence	Metrics it likely influences
Invest in sustainable innovations: electrification, automation, digitalisation	Market drivers push decarbonization and productivity; Kalmar explicitly invests in these areas	Strategy section: electrification/ automation/ digitalisation; connectivity solutions; software/analytics/AI ¹²⁵	Eco-portfolio share, product mix, R&D conversion (inference) ¹²⁴
Transform and consolidate IT into a single integrated service delivery model with AI-driven operations (TCS partnership)	Post-separation IT simplification is a prerequisite for agility and cost reduction	TCS press release: consolidate IT landscape; unified command center; AI-driven ops; improve employee experience ⁴⁷	IT run cost, incident metrics, employee experience ⁴⁷

Full value chain / operating model map (Section 3)

flowchart LR

```

A[Market & Customer\nPorts, terminals, DCs, heavy industry] --> B[Product & R&D\nElectrification, automation, digitalization]
B --> C[Manufacturing & Supply Chain\nFactories, sourcing, quality]
C --> D[Delivery & Commissioning\nProjects, installations]
D --> E[Connected Operations\nTelemetry, diagnostics]
E --> F[Services & Aftermarket\nSpare parts, contracts, uptime solutions]
F --> G[Commercial Excellence\nPricing, lifecycle value]
H[Corporate Functions\nFinance, HR, Legal] --> I[Enterprise IT Core\nSingle delivery model with TCS]
I --> C
I --> F

```

Publicly evidenced systems: Proprietary connectivity solutions (name not given) and “software, analytics and AI” building on equipment data; “cloud-based data services” appear as revenue recognition category (accounting disclosure). ⁴⁹

Not publicly evidenced: ERP/MES names; service platform brand; IoT platform vendor.

Strategic opportunity areas for TCS (Section 4)

Opportunity: Post-separation IT consolidation into a measurable ‘digital core’

Situation: TCS is selected as strategic IT partner to consolidate applications, end-user services, infrastructure and hybrid cloud ops, with AI-driven framework and unified command center. ⁴⁷

Complication: Post-separation landscapes often have duplicated tools, unclear ownership, and “transition fatigue.” (Informed inference; explicitly referenced by TCS as post-separation transition capability.) ¹²⁶

Resolution hypothesis: Build a service blueprint with clear ownership, observability, and automation; align metrics to Kalmar’s Driving Excellence goals. ⁴⁸

Business value at stake: cost reduction + agility improvements (explicit TCS framing). ⁴⁷

Likely sponsor: CIO (Tero Lehtonen) named in TCS release; COO/CEO given strategic pillar alignment. ⁴⁴
 Why TCS credible: customer-specific press release and “successful history of collaboration” claims. ⁴⁷

Opportunity: Data-to-service monetization—connected equipment into recurring revenue

Situation: Kalmar emphasizes connectivity solutions and increased software/robotics/autonomous features; services growth is a strategic pillar. ¹²⁵

Complication: Turning telemetry into profitable services requires data products, pricing models, and integration with service execution. (Informed inference.)

Resolution hypothesis: “Service intelligence platform” enabling predictive maintenance offerings, SLA-based contracts, and lifecycle value dashboards.

Business value: higher capture rate and recurring revenue (aligned to services growth narrative). ¹²⁴

Sponsor: Head of Services, Chief Digital/Technology leadership (titles in annual report; details partially evidenced). ¹²⁷

Opportunity: Efficiency program enablement via digital process mining and automation

Situation: €50m gross efficiency improvements targeted by end-2026; measures include pricing management, supply chain/process optimization, faster decision-making. ⁴⁵

Resolution hypothesis: process mining + automation for order-to-cash, procure-to-pay, and service-to-cash workflows (inference).

AI, GenAI, and agentic AI opportunities (Section 5)

A) Business AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
Predictive maintenance and uptime optimization for installed base	Services growth pillar + connected equipment data	Equipment telemetry + service history + parts inventory ⁴⁹	Higher uptime; service contract value (inference)	Safety; liability	Informed inference
AI-assisted safety and autonomy features analytics	Demand for automation and safety	Sensor data + operational context	Improved safety outcomes (inference)	Safety certification	Informed inference

B) IT / operations AI opportunities

Use case	Triggering pain	Required data/systems	Expected impact	Risk/ governance	Maturity
AI-driven ops and unified command center across global IT	Explicitly in TCS scope	IT telemetry + ITSM + runbooks ⁴⁷	Lower complexity; better reliability	Automation guardrails	Confirmed direction ⁴⁷

C) Agentic AI opportunities

Use case	Triggering pain	Required data/ systems	Expected impact	Risk/ governance	Maturity
Agentic “service contract renewals” orchestrator (usage → health score → proposal → approvals)	Scale recurring services	Telemetry + CRM + pricing rules (not evidenced)	Higher renewals (inference)	Pricing governance	Informed inference

Top key problem statements (Section 6)

- 1) How do we consolidate post-separation IT into a single delivery model that reduces cost and complexity while increasing agility? ⁴⁸
- 2) How do we achieve €50m efficiency improvements by end-2026 without starving innovation (electrification/automation/digitalization)? ¹²⁸
- 3) How do we convert connected equipment data into scalable, high-margin recurring services? ¹²⁵
- 4) How do we ensure digital solutions and automation remain safe, reliable, and customer-trusted as autonomy increases? ⁴⁹

TCS engagement angle (Section 7)

Strongest why-now: new independent company + active efficiency program + signed strategic IT partnership centered on AI-first digital core. ⁵²

Best-fit TCS capabilities: post-separation IT transformation, SIAM/ITSM, hybrid cloud ops, AIOps/command center, data platform and digital engineering for connected services. ¹²⁹

Entry points: CIO (named), CEO/strategy leadership due to direct alignment with strategic pillars. ⁴⁴

Workshop opener: “Your strategy demands electrification, automation, and services growth—what digital core capabilities must be standardized globally in 18 months to make those pillars scale?” ¹³⁰

Workshop themes: (1) Post-separation digital core and IT consolidation; (2) Service monetization from connected equipment data. ¹³¹

Workshop relevance summary (Section 8)

Why in top-6: intense “post-separation + efficiency + digital product/service” change agenda with public TCS partnership evidence. ⁴⁸

What to unlock: a coordinated roadmap where IT consolidation directly enables service monetization and innovation in electrification/automation. ¹³²

One-sentence takeaway: **Kalmar’s near-term value is unlocked by post-separation simplification—then using data, software, and AI to turn equipment leadership into recurring services advantage.** ¹³¹

Evidence gaps to close: named connectivity platform and service product stack, target-state enterprise architecture post-TCS consolidation, and quantified “services capture rate” baselines. ¹²¹

Part C — Cross-account synthesis for the Finland workshop

Recurring strategic themes (confirmed patterns):

AI and data are explicitly positioned as strategic differentiators at OP Pohjola and Kesko, and as operational enablers at Euroclear (group AI), Kalmar (analytics/AI on equipment data), and DNA (AI requires cloud data platform). ¹³³

Core modernization and operating model transformation are active in multiple accounts: Kesko largest IT transformation, DNA cloud migration program, Kalmar IT consolidation post-demerger, UPM end-to-end IT transformation, Euroclear Finland platform modernization, and OP's increased ICT investment and AI-first pivot. ¹³⁴

Security/resilience is a recurring (often regulatory-adjacent) force: Kesko highlights NIS2/CER and AI Act governance; OP emphasizes data protection/cyber preparedness; telecom and market infrastructure are inherently critical. ¹³⁵

Recurring operating-model bottlenecks (informed inference, grounded in evidence of transformations):

Fragmented ownership and multi-partner delivery risk (Kesko explicitly consolidating partners; Kalmar consolidating into a single model; UPM implementing SIAM). ¹³⁶

Transformation drag due to “must-not-fail” operations in retail logistics, telecom reliability, market infrastructure and banking—driving need for phased delivery and strong observability. ¹³⁷

Recurring data / AI opportunity clusters (anchored in customer statements):

Customer experience personalization and digital journey redesign (Kesko personalization; OP AI assistant; DNA customer experience goals; Euroclear/EVIA style assistants). ¹³⁸

Operational efficiency via AI/automation and AIOps (Kesko ignio AIOps; UPM ignio; Kalmar AI-driven ops; all are run/transform patterns). ¹³⁹

Regulatory/controls-led AI adoption (Kesko AI Act timeline; OP responsible AI policies update; Euroclear responsible AI posture). ¹⁴⁰

Scoring framework (1–5) per account

Scores reflect urgency, transformation intensity, AI relevance, TCS credibility, public evidence quality, and workshop suitability.

Account	Urgency	Transformation intensity	AI relevance	TCS credibility	Public evidence quality	Workshop suitability	Rationale snapshot
OP Pohjola	3	3	4	2	4	4	High AI-first + ICT investment evidence, but weak TCS relationship in public sources ¹⁴¹

Account	Urgency	Transformation intensity	AI relevance	TCS credibility	Public evidence quality	Workshop suitability	Rationale snapshot
Euroclear Finland	4	4	3	5	4	4	TCS BaNCS + T2S integration evidenced; next-horizon ops/data opportunity ⁶
Kesko	5	5	5	5	5	5	Biggest IT transformation; explicit AI/data strategy; TCS strategic partner ³
DNA	5	5	4	5	4	5	Quantified cloud migration + long partnership; AI depends on cloud data platform ⁴
UPM	4	4	3	5	4	4	End-to-end IT transformation + portfolio + industrial scale-up needs ¹¹⁹
Kalmar	5	5	4	5	5	5	Post-demerger, efficiency initiative, and new strategic IT consolidation with TCS ⁵²

Answers to the required cross-account questions

What are the most common executive problem statements across TCS Finland's top accounts?

The dominant shared problem statement is: **"How do we modernize a complex, business-critical core while improving resilience and reducing cost?"** This is explicit in large-scale IT transformations (Kesko, DNA, Kalmar, UPM) and implicit in OP's increased ICT investment and Euroclear's post-T2S optimization needs. ¹⁴²

A second shared statement is: **“How do we industrialize AI safely and profitably (governance + platform + value)?”** This is explicit in OP’s AI-first stance and responsible AI updates, Kesko’s data balance sheet and AI Act readiness, and Euroclear group’s responsible AI assistant posture, with DNA and Kalmar positioning AI as enabled by cloud/data and connected equipment data respectively. ¹⁴³

A third shared statement is: **“How do we run multi-partner/multi-platform operations as one coherent operating model?”** This is directly evidenced by Kesko concentrating partners, UPM adopting SIAM, and Kalmar consolidating into a single delivery model. ¹⁴⁴

Which of these are board-level vs CIO/COO-level vs business-unit-level issues?

Board-level: portfolio/structural value creation (Kalmar post-demerger performance targets; UPM JV/strategic review), financial discipline and resilience in critical infrastructure (Euroclear), and trust/regulatory exposure (OP sustainable finance + responsible AI). ¹⁴⁵

CIO/COO-level: core modernization delivery (Kesko SAP/IT transformation; DNA cloud migration; UPM SIAM/ignio; Kalmar IT consolidation) and cyber/operational resilience controls. ¹⁴⁶

Business-unit-level: personalization and multichannel growth (Kesko), services monetization (Kalmar), new product commercialization and ramp-up (UPM), and customer experience improvements (DNA, OP). ¹⁴⁷

Where does AI genuinely matter versus where core modernization matters more?

AI genuinely matters where it is already embedded in strategy and channels (OP, Kesko) or explicitly required by the business model (DNA stating AI services require cloud data platform). ¹⁴⁸

Core modernization matters more (as the gating factor) in market infrastructure and post-separation enterprise contexts: Euroclear Finland’s value is still heavily driven by standards-based platform integration and operational excellence post-T2S; Kalmar and UPM need simplified digital cores (SIAM/command center) before AI can scale safely across enterprise workflows. ¹⁴⁹

The workshop stance should therefore be: **AI on top of a clean operating model**—prioritize modernization and governance first where the platform is the constraint, then scale AI. ¹⁵⁰

Which accounts appear to have the clearest near-term deal density for TCS Finland?

Highest near-term density: **Kesko, DNA, Kalmar**—each has public, active, multi-year transformation scopes with clear “next 12–24 months” execution agendas. ¹⁵¹

Second tier: **UPM** (signed agreement with broad scope) and **Euroclear Finland** (platform already modernized; next-horizon programs still valuable but likely more incremental/optimization-heavy). ¹⁵²

Strategic target: **OP Pohjola**—high workshop value because AI-first + regulated AI governance, but relationship evidence gap reduces near-term certainty in this pack. ¹⁵³

Which 2–3 accounts should be prioritized first in a workshop setting?

Prioritize **Kesko + DNA + Kalmar** as the opening trio because (a) they represent distinct industries (retail, telecom, industrial logistics), (b) each has explicit, active TCS-linked transformation programs, and (c) they cover the three reusable workshop “spines”: ERP/core modernization, cloud migration, and post-separation IT consolidation. ¹⁵⁴

Topics reusable across multiple accounts

A single set of workshop modules can be reused: “AI governance and safe scaling,” “AIOps and operational excellence,” “cloud economics (FinOps) and resilience,” “data products and lineage,” and “multi-partner operating model design.” These map directly to stated priorities at Kesko, OP, Euroclear group, Kalmar, DNA, and UPM. ¹⁵⁵

Recommended workshop sequence (Finland portfolio workshop)

flowchart TD

```
S[Set the frame:\nAI as operating-model change\n+ resilience + cost-to-value]
--> M1[Module 1:\nModernization roadmaps\nSAP/core, cloud, post-separation]
M1 --> M2[Module 2:\nData foundation & governance\nAI Act readiness, lineage, security]
M2 --> M3[Module 3:\nAI value threads\nCX, productivity, risk]
M3 --> B1[Breakouts:\nKesko (SAP+data)\nDNA (cloud+data)\nKalmar (post-sep IT+services)]
B1 --> B2[Breakouts:\nUPM (SIAM+portfolio)\nEuroclear (post-T2S ops+data)\nOP (AI-first controls)]
B2 --> C[Close:\nCross-account playbooks\n+ opportunity pipeline\n+ next workshop commitments]
```

Explicit gaps and request for primary docs (to improve the pack further):

Some primary annual report PDFs were not retrievable from their hosts during this run (OP annual report PDFs and some Kesko annual report PDFs), so the OP strategy detail leans on interim/half-year and OP Year evidence, and Kesko evidence leans on its Board report PDF + strategy pages + data balance sheet report. If you can share direct PDFs or screenshots of (a) OP Pohjola Annual Report 2025 strategy/priorities pages, (b) OP Data Balance Sheet, and (c) any internal TCS Finland account briefs, the OP relationship assessment and system-level value-chain mapping can be tightened substantially. ¹⁵⁶
